Consumer Medicine Information

TAMIFLU®
Oseltamivir
Capsules 75 mg

What is in this leaflet

This leaflet answers some common questions about TAMIFLU capsules.

It does not contain all the available information.

It does not take the place of talking to your pharmacist or doctor.

All medicines have risks and benefits. Your pharmacist or doctor has weighed the risks of you taking TAMIFLU against the benefits expected for you.

If you have any concerns about taking this medicine, ask your pharmacist or doctor.

Keep this leaflet with the medicine. You may need to read it again.

What TAMIFLU is used for

TAMIFLU is an antiviral medicine containing the active ingredient oseltamivir.

TAMIFLU is used for the treatment of influenza (flu) in adults and children 1 year or older.

TAMIFLU is also used for the prevention of the flu in adults and children 1 year or older.

The flu is an infection caused by the influenza virus. Typical symptoms of influenza include fever, headache, muscle aches, sore throat, cough and extreme tiredness. TAMIFLU is not effective against the common cold or throat or chest infections caused by other viruses.

TAMIFLU belongs to a group of medicines called neuraminidase inhibitors. These medicines attack the influenza virus and prevent it from spreading inside your body.

Taking TAMIFLU can prevent you from catching the flu, or if you have already caught the flu, it can make the symptoms less severe and help you recover faster. TAMIFLU will help reduce the chances of you passing the flu on to someone else. You will also be less likely to develop complications of the flu, such as bronchitis, pneumonia, sinusitis (infected sinuses) and earache.

Ask your pharmacist or doctor if you have any questions about why TAMIFLU has been recommended for you.

Ask your pharmacist or doctor about having the flu vaccination. Vaccination every year is the best way to prevent the flu.

TAMIFLU 75mg capsules is a Pharmacist Only Medicine for the treatment or prevention of influenza in adults and children aged 13 years and over who have been exposed to the influenza virus. For children 12 years of age and under, Tamiflu 75mg capsules is a Prescription Only Medicine for the treatment or prevention of influenza.
Before you take TAMIFLU

When you must not take it
Do not take TAMIFLU if:

1. you have had an allergic reaction to TAMIFLU or any ingredients listed at the end of this leaflet
2. the package is torn or shows signs of tampering
3. the expiry date printed on the pack has passed.
   If you take this medicine after the expiry date has passed, it may not work as well.

If you are not sure if you should be taking TAMIFLU, talk to your pharmacist or doctor.

Use in the elderly
Although there is limited experience with use of TAMIFLU in patients 65 years and older, the dose recommended for use in elderly patients is the same as that recommended for adults.

Use in children
Do not give TAMIFLU to children under 2 weeks of age for the treatment of influenza.

Do not give TAMIFLU to children under 1 year of age for the prevention of influenza.
Safety and effectiveness of TAMIFLU in children under 1 year of age have not been established when used for the prevention of influenza.

Please consult with your doctor if you would like to use TAMIFLU in children. TAMIFLU must not be given to children 12 years of age and under without a prescription from your doctor.

Before you start to take it
Tell your pharmacist or doctor if:

1. you are pregnant or plan to become pregnant
   It is not known whether TAMIFLU is harmful to an unborn baby when taken by a pregnant woman. If there is a need to take TAMIFLU when you are pregnant your doctor will discuss the risks and benefits to you and the unborn baby.

2. you are breast-feeding or plan to breast-feed
   TAMIFLU may pass into breast milk. Your doctor will discuss the risks and benefits of using TAMIFLU if you are breast-feeding.

3. you have any other health problems, especially kidney disease

4. you are allergic to any other medicines, foods, dyes or preservatives.

If you have not told your pharmacist or doctor about any of the above, tell them before you start taking TAMIFLU.
Taking other medicines
Tell your pharmacist or doctor if you are taking any other medicines, including any that you have bought from a pharmacy, supermarket or health food shop.

Some medicines may be affected by TAMIFLU, or may affect how well it works. You may need to use different amounts of your medicine, or you may need to take different medicines. Your pharmacist or doctor will advise you.

Your pharmacist or doctor has more information on medicines to be careful with or avoid while taking TAMIFLU.

How to take TAMIFLU

Follow all directions given to you by your pharmacist or doctor carefully.

They may differ from the information contained in this leaflet.

How much to take
Take TAMIFLU exactly as your pharmacist or doctor has advised.

Your pharmacist or doctor will tell you how many TAMIFLU capsules to take each day.

If you are unable to swallow capsules your pharmacist can advise you on what to do. Alternatively, TAMIFLU oral suspension is available with a prescription from your doctor. For further information about TAMIFLU oral suspension please see http://www.medsafe.govt.nz/Consumers/cmi for the Consumer Medicine Information (CMI) leaflet.

If you have kidney disease your pharmacist or doctor may advise you to take a lower dose of TAMIFLU.

Treatment of the flu
Start taking TAMIFLU as soon as possible after you have been diagnosed with the flu.

The earlier you start treatment with TAMIFLU, the shorter the duration of your flu.

Adults and children 13 years or older
The usual dose is one TAMIFLU 75 mg capsule twice a day for five days.

Children 1 year or older
Please consult with your doctor if you would like to use TAMIFLU in children. TAMIFLU must not be given to children 12 years of age and under without a prescription from your doctor.

Children 2 weeks to less than 1 year of age
TAMIFLU 6mg/mL oral suspension is the preferred product (see TAMIFLU 6mg/mL oral suspension Consumer Medicine Information).

Tamiflu oral suspension is available with a prescription from your doctor.

Prevention of the flu
Adults and children 13 years or older
The usual dose is one TAMIFLU 75 mg capsule once a day for 10 days following close contact with someone who has the flu. You should start taking TAMIFLU within 2 days of the close contact.
When there is an outbreak of the flu in the community one TAMIFLU 75 mg capsule can be taken once a day while protection is required. TAMIFLU has been shown to be well tolerated and effective when taken for up to six weeks.

**Children 1 year or older**

Please consult with your doctor if you would like to use TAMIFLU in children. TAMIFLU must not be given to children 12 years of age and under without a prescription from your doctor.

**Do not give TAMIFLU to children under 1 year of age.** Safety and effectiveness in children under one year of age have not been established.

**How to take it**

TAMIFLU can be taken with or without food. However, you may find TAMIFLU is easier on your stomach when taken with food.

**Swallow capsules whole with a glass of water.**

**Do not break or chew the capsules before swallowing.**

**If you cannot swallow the capsule**

**Adults and children 13 years or older**

Adults and children who are unable to swallow capsules may receive a 75 mg dose of TAMIFLU by following the instructions below.

1. Hold one TAMIFLU 75 mg capsule over a small bowl, carefully pull the capsule open and pour the powder into the bowl.
2. Add a suitable, small amount (1 teaspoon maximum) of sweetened food product such as regular or sugar-free chocolate syrup, honey, light brown or table sugar dissolved in water, dessert toppings, sweetened condensed milk, apple sauce or yogurt to mask the bitter taste of the medicine.
3. Stir the mixture well and give the entire contents to the patient. The mixture must be swallowed immediately after its preparation. If there is some mixture left inside the bowl, rinse the bowl with a small amount of water and have the patient drink this remaining mixture. It is not necessary to administer any undissolved white powder.

**Children (1 year or older)**

Please consult with your doctor if you would like to use TAMIFLU in children.

Children who are unable to swallow capsules and require a dose different to that available in capsule form may receive appropriate doses of TAMIFLU by following the instructions below.

1. Hold one TAMIFLU 75 mg capsule over a small bowl, carefully pull the capsule open and pour the powder into the bowl.
2. Add 5 mL water to the powder using a syringe with markings (called a “graduated syringe”) to show how much fluid has been drawn up. Stir for about two minutes.
3. Draw up into the syringe the correct amount of mixture from the bowl (see table below) based on the recommended dose required, which is body weight dependent (see tables above).

   It is not necessary to draw up any undissolved white powder.
<table>
<thead>
<tr>
<th>Body weight</th>
<th>Recommended dose</th>
<th>Amount of TAMIFLU mixture for one dose (15 mg/mL)</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤ 15 kg</td>
<td>30 mg</td>
<td>2 mL</td>
</tr>
<tr>
<td>&gt; 15 to 23 kg</td>
<td>45 mg</td>
<td>3 mL</td>
</tr>
<tr>
<td>&gt; 23 kg to 40 kg</td>
<td>60 mg</td>
<td>4 mL</td>
</tr>
<tr>
<td>&gt; 40 kg</td>
<td>75 mg</td>
<td>5 mL</td>
</tr>
</tbody>
</table>

Note: This procedure results in a 15 mg/mL mixture, which is different from the commercially supplied Tamiflu Oral Suspension.

4. Push down on the plunger of the syringe, to empty its entire contents into a second bowl. Discard any unused mixture.

5. In the second bowl, add a suitable, small amount (1 teaspoon maximum) of sweetened food product such as regular or sugar-free chocolate syrup, honey (only for children two years or older), light brown or table sugar dissolved in water, dessert toppings, sweetened condensed milk, apple sauce or yogurt to the mixture to mask the bitter taste of the medicine.

6. Stir this mixture well and give the entire contents of the second bowl to the patient. This mixture must be swallowed immediately after its preparation. If there is some mixture left inside the bowl, rinse the bowl with a small amount of water and have the patient drink this remaining mixture.

**When to take it**

TAMIFLU should be started as soon as possible; within the first two days of the onset of the first symptoms of the flu or exposure to someone with the flu.

Taking your medicine at the same time each day will help you remember when to take it.

**How long to take it**

Continue taking TAMIFLU until your pharmacist or doctor tells you to stop or your course of treatment is complete.

**If you forget to take it**

If it is almost time for your next dose, skip the dose you missed and take your next dose when you are meant to.

Otherwise, take it as soon as you remember and then go back to taking it as you would normally.

If you are not sure what to do, ask your pharmacist or doctor.

If you have trouble remembering your dose, ask your pharmacist for some hints.

**If you take too much (overdose)**

If you or anyone else may have taken too much TAMIFLU immediately telephone your doctor or National Poisons Information Centre (telephone 0800 POISON or 0800 764 766), or go to an Accident and Emergency Centre. Do this even if there are no signs of discomfort or poisoning.

Keep telephone numbers for these places handy.

The following are some symptoms of overdose which may or may not occur:

- nausea (feeling like vomiting)
- vomiting

If you are not sure what to do, contact your doctor or pharmacist.
While you are taking TAMIFLU

Things you must do
Tell all doctors, dentists and pharmacists who are treating you that you are taking TAMIFLU.

Tell your pharmacist or doctor if you become pregnant while taking TAMIFLU.

Tell your pharmacist or doctor if, for any reason, you have not taken your medicine exactly as advised. Otherwise, your pharmacist or doctor may think that it was not effective and change your treatment unnecessarily.

If symptoms persist, please consult your pharmacist or doctor.

Things you must not do
Do not stop taking TAMIFLU or change the dose without first checking with your pharmacist or doctor.

Do not let yourself run out of medicine over the weekend or on holidays.

Do not give TAMIFLU to anyone else even if they have the same condition as you.

Do not use TAMIFLU to treat other complaints unless your doctor says to.

Do not take any other medicines, whether they require a prescription or not, without first telling your pharmacist or doctor that you are taking TAMIFLU.

Things to be careful of
Be careful driving or operating machinery until you know how TAMIFLU affects you.

However, TAMIFLU is not expected to affect your ability to drive a car or operate machinery.

Side effects
Tell your pharmacist or doctor as soon as possible if you do not feel well while you are taking TAMIFLU.

TAMIFLU helps most people with the flu but it may have unwanted side effects in some people.

All medicines can have side effects. Sometimes they are serious, most of the time they are not. You may need medical treatment if you get some of the side effects.

Ask your pharmacist or doctor to answer any questions you may have.

Tell your pharmacist or doctor if you notice any of the following and they worry you:

- nausea (feeling like vomiting)
- vomiting
- dizziness/spinning sensation (vertigo)
- headache
- stomach pain, indigestion
- diarrhoea
- cough
- bronchitis
- asthma (breathlessness, wheezing, a cough sometimes brought on by exercise and a feeling of tightness in the chest)
- sinusitis (stuffy nose and/or feeling of tension or fullness in the nose, cheeks and behind the eyes, sometimes with a throbbing ache)
- runny nose or nose bleeds
- ear problems or ear infection
- conjunctivitis (discharge from the eyes with itching and crusty eyelids)
- insomnia (difficulty sleeping)
- fatigue
- aches and pains
- mild skin rash

These are the more common side effects of TAMIFLU. Mostly these are mild. If nausea and vomiting do occur they will usually do so with the first dose and their effects will generally decrease as you get used to your medicine.

Taking TAMIFLU with food may reduce the chance of feeling or being sick (nausea or vomiting).

Tell your doctor immediately or go to your nearest Accident and Emergency Centre, if you notice any of the following:

- sudden signs of allergy such as rash, itching or hives on the skin, swelling of the face, lips, tongue or other parts of the body, shortness of breath, wheezing or trouble breathing.
- yellowing of the skin and/or eyes, itching and dark coloured urine.
- chest infection with fever, chills, shortness of breath, cough, phlegm and occasional blood.
- convulsions, confusion, drowsiness, abnormal behaviour, delusions, hallucinations, agitation, anxiety and nightmares. These symptoms may also occur in flu patients not treated with TAMIFLU.
  Patients (especially children) and their caregivers should look out for signs of abnormal behaviour and contact a doctor immediately.
- diarrhoea with blood, along with fever and severe stomach pain.

These are serious side effects. You may need urgent medical attention. Serious side effects are rare.

This is not a complete list of all possible side effects. Others may occur in some people and there may be some side effects not yet known.

Tell your pharmacist or doctor if you notice anything else that is making you feel unwell, even if it is not on this list.

Ask your pharmacist or doctor if you don’t understand anything in this list.

Do not be alarmed by this list of possible side effects. You may not experience any of them.

---

**After taking TAMIFLU**

**Storage**

Keep your TAMIFLU capsules in the blister pack until it is time to take them.
If you take the capsules out of the blister pack they may not keep well.

Keep TAMIFLU 75 mg capsules in a cool dry place where the temperature stays at or below 25 °C.

Do not store TAMIFLU, or any other medicine, in a bathroom or near a sink.

Do not leave TAMIFLU in the car or on window sills. Heat and dampness can destroy some medicines.

Keep TAMIFLU where young children cannot reach it.
A locked cupboard at least one-and-a-half metres above the ground is a good place to store medicines.

**Disposal**

If your pharmacist or doctor tells you to stop taking TAMIFLU, or it has passed its expiry date, ask your pharmacist what to do with any left over medicine.
Product description

Availability
TAMIFLU 75 mg capsules come in blister packs containing 10 capsules.

What TAMIFLU looks like

Capsules
TAMIFLU 75 mg capsules have a grey opaque body with "ROCHE" printed on it in blue ink and a light yellow opaque cap with "75 mg" printed on it in blue ink.
