NEW ZEALAND CONSUMER MEDICINE INFORMATION

BUTACORT 100
Budesonide Nasal Spray, 100 micrograms (µg) per spray

What is in this leaflet

Please read this leaflet carefully before you start using Butacort 100.

This leaflet answers some common questions about Butacort 100.

It does not contain all the available information. It does not take the place of talking to your doctor or pharmacist.

All medicines have risks and benefits. Your doctor has weighed the risks of you using Butacort 100 against the benefits they expect it will have for you.

If you have any concerns about using this medicine, ask your doctor or pharmacist.

Keep this leaflet with the medicine. You may need to read it again.

What Butacort 100 is used for

Butacort 100 works by reducing the swelling and irritation in the lining of the nose. It relieves the symptoms of blocked nose, runny nose, itchy nose and sneezing.

Your doctor may have prescribed Butacort 100 for another purpose.

Ask your doctor if you have any questions about why this medicine has been prescribed for you.

Butacort 100 is available only on prescription from your doctor.

There is no evidence that Butacort 100 is addictive.

There is not enough information to recommend the use of this medicine for children under the age of 6 years.

Before you use Butacort 100

When you must not use it

Do not use Butacort 100 if you have an allergy to:

- any medicine containing budesonide
- any other corticosteroid
- any of the ingredients listed at the end of this leaflet.

Some of the symptoms of an allergic reaction may include: shortness of breath; wheezing or difficulty breathing; swelling of the face, lips, tongue or other parts of the body; rash, itching or hives on the skin.

Do not use this medicine if you have a severe infection, especially thrush, in your nose.

Do not use this medicine if you bleed easily or have recurring nose bleeds.

Do not use Butacort 100 after the expiry date printed on the pack or if the packaging is torn or shows signs of tampering. If it has expired or is damaged, return it to your pharmacist for disposal.

If you are not sure whether you should start using this medicine, talk to your doctor.

Before you start to use it

Tell your doctor or pharmacist if you have allergies to any other medicines, foods, preservatives or dyes

Tell your doctor if you have or have had any of the following medical conditions:

- nasal, sinus or chest infection
- have severe nasal congestion or obstruction
- tuberculosis
- have recently had an injury or surgery to your nose
- have open sores in your nose.

Tell your doctor if you are pregnant or plan to become pregnant or are breast-feeding. Your doctor can discuss with you the risks and benefits involved.

If you have not told your doctor about any of the above, tell them before you start using Butacort 100.

Taking other medicines

Tell your doctor or pharmacist if you are using or taking any other medicines, including any that you get without a prescription from
your pharmacy, supermarket or health food shop.

You should also tell any health professional who is prescribing a new medication for you that you are using Butacort 100.

Some medicines may interfere with Butacort 100. These include:

- other corticosteroid medicines, such as tablets, asthma inhalers, nasal sprays, or eye/nose drops
- some medicines used to treat fungal infections such as ketoconazole, itraconazole, fluconazole
- cimetidine, a medicine used to treat reflux and stomach ulcers
- some antibiotic medicines, including erythromycin and clarithromycin.

These medicines may be affected by Butacort 100 or may affect how well it works. You may need different amounts of your medicines, or you may need to take different medicines.

This list of medicines is not complete. Your doctor and pharmacist have more information on medicines to be careful with while using this medicine.

How to use Butacort 100

Follow all directions given to you by your doctor or pharmacist carefully. They may differ from the information contained in this leaflet.

If you do not understand the instructions on the carton, ask your doctor or pharmacist for help.

Instructions for use

1. Shake the bottle well before use. Remove the dust cap from the nasal applicator.

2. Hold the nasal spray as shown. Prime the pump by firmly pressing downwards on the white collar. Repeat until a fine spray is produced. The nasal spray is now ready for use. It will not require repriming unless infrequently used or disassembled.

3. Gently blow your nose to clear the nostrils. Tilt your head forward slightly, close one nostril and carefully insert the nasal applicator into the other nostril.

4. Holding the bottle upright, press firmly downwards once or twice on the white collar to deliver the number of sprays required. Breathe gently inwards through the nostril.

5. Then breathe out through your mouth.

6. Repeat the procedure in the other nostril.

7. Replace the dust cap.

Cleaning your applicator

Remove the dust cap, press gently upwards on the white collar and the nasal applicator will come free. Wash the applicator and dust cap under lukewarm water. Dry and replace.

If the nasal applicator becomes blocked, remove the dust cap, unscrew the pump mechanism from the bottle and soak it in warm water for a few minutes. Rinse under lukewarm water, dry and reassemble on the bottle. Do not attempt to unblock the applicator with a pin or other sharp object.

How much to use

It is important that you use Butacort 100 exactly as directed by your doctor. Do not use more than recommended; using more or less may make your symptoms worse.

The usual dosage for adults and children over 6 years is initially one or two sprays into each nostril in the morning, then after 2 to 3 days, one spray into each nostril in the morning.

Your doctor may tell you to use different doses to these. If so, follow their instructions.

How to use it

You must use Butacort 100 for your nose only. If you find it difficult to use your spray, talk to your doctor or pharmacist.

Butacort 100 should be shaken before use.

When to use it

Use your medicine at about the same time each day. Using it at the same time each day will have the best effect. It will also help you remember when to use it.

It does not matter if you use Butacort 100 before or after food.

How long to use it

It usually takes 2 to 3 days before you notice any improvement in your hayfever symptoms.

If you suffer from hayfever, you should start your treatment just before the hayfever season to prevent symptoms from starting.
If hayfever symptoms do not improve within 7 days of treatment, see your doctor.

Do not use for more than 6 months unless instructed by your doctor.

If you forget to use it
If you forget a dose, just take the next dose at the normal time. Do not take a double dose. This may increase the chance of you getting an unwanted side effect.

If you are not sure what to do, ask your doctor or pharmacist.

If you have trouble remembering to use your medicine, ask your pharmacist for some hints.

While you are using Butacort 100

Things you must do
If you are about to be started on any new medicine, tell your doctor and pharmacist that you are using Butacort 100.

Tell any other doctors, dentists, and pharmacists who treat you that you are using Butacort 100.

If you become pregnant while taking this medicine, tell your doctor immediately.

Keep all of your doctor’s appointments so that your progress can be checked. Your doctor may do some tests to make sure the medicine is working and to prevent unwanted side effects.

Things you must not do
Do not use Butacort 100 to treat any other complaints unless your doctor tells you to.

Do not give your Butacort 100 to anyone else, even if they have the same condition as you.

Things to be careful of
Be careful driving or operating machinery until you know how Butacort 100 affects you. This medicine may cause blurred vision, tiredness or dizziness in some people. If you have this symptom, do not drive, operate machinery or do anything else that could be dangerous.

In case of overdose

If you use too much (overdose)
Immediately telephone your doctor, pharmacist or the National Poisons Information Centre (0800 POISON or 0800 764 766) for advice if you think that you or anyone else may have used too much Butacort 100. Do this even if there are no signs of discomfort or poisoning. You may need urgent medical attention.

Symptoms of an overdose only develop after using too much Butacort 100 over a long period of time and may include weight gain, a rounded (moon shaped) face and high blood pressure.

Side effects

Tell your doctor or pharmacist as soon as possible if you do not feel well while you are taking Butacort 100.

This medicine helps most people but it may have unwanted side effects in a few people. All medicines can have side effects. Sometimes they are serious, most of the time they are not. You may need medical attention if you get some of the side effects.

Ask your doctor or pharmacist to answer any questions you may have.

Tell your doctor or pharmacist if you notice any of the following and they worry you:
- nose irritation
- nose bleeds
- increased amount of mucous in nose or chest which may be bloody
- nasal crust
- sneezing after spraying
- headache
- itching or sore throat
- dry nose or mouth
- cough
- dizziness
- tiredness
- nausea
- blurred vision
- loss of appetite
- stomach problems
- abdominal discomfort
- earache or ear itchiness
- bad taste
- strong smell of the spray
- tremor or shaking.
- joint pain
- impaired sexual function
- asthma or tight chest
- runny or blocked nose
- feeling of pressure, tension or fullness in nose, cheeks or face
- red skin

The above list includes some of the side effects of your medicine.

Tell your doctor as soon as possible if you notice any of the following:
- an ulcer (open wound in your nose)
- an injury to your head or nose
- sign or symptoms of a severe nasal infection such as fever, pain or swelling, or discoloured nasal discharges
- urinary tract or bladder infection or pain when urinating
- chest infection

The above list includes serious side effects that may require medical attention.

If any of the following happen, tell your doctor immediately or go to Accident and Emergency at your nearest hospital:
- shortness of breath, wheezing or difficulty breathing
- swelling of the face, lips, tongue or other parts of the body which may cause difficulty swallowing
- rash, itching or hives on the skin

The above list includes serious side effects that may require medical attention. Serious side effects are rare.
Tell your doctor or pharmacist if you notice anything that is making you feel unwell. Other side effects not listed above may also occur in some people. Tell your doctor or pharmacist if you notice any other effects.

Corticosteroids that are taken through the nose for long periods of time and not reduced to the lowest effective dose may affect how children grow. In rare cases, some children may be sensitive to the growth effects of corticosteroids, so the doctor may monitor a child’s height.

Do not be alarmed by this list of possible side effects. You may not experience any of them.

### Product description

#### What it looks like
Butacort 100 comes in an amber glass bottle fitted with a pump, and nasal applicator. Each bottle provides approximately 200 sprays, when used as recommended.

#### Ingredients
